

ANADIGICS

Warren, NJ

Lamb provided Planning, Design and Construction services to renovate and upgrade production clean room space for this manufacturer of integrated circuits for the communications industry.

Anadigics changed production processes and required a new layout in their class 100 space. The 10,000 S.F. renovation included installation of new and relocated partitions, a new gowning room, new and relocated air handling/HEPA units and process utility changes. Utilities affected included clean dry air, compressed air, chilled water, nitrogen, vacuum and specialty gases.
