

CLEVELAND BROTHERS

State College, PA

Lamb Planned, Designed and Built this 85,000 S.F. facility with 10,000 S.F. of 2 story office and show room space. It is a Central Parts Distribution Facility (CPDF) for the Caterpillar dealer of Central and Western Pennsylvania.

To ensure environmental protections, the warehouse floor was constructed to contain sprinkler water and hazardous material spills. Type K Concrete was utilized in the floor to reduce shrinkage and control joints for better fork truck maneuvering. Also included are 20 dock doors, levelers and restraints along with extensive outside storage.

The project was the first in a new corporate center which required numerous land development issues to be resolved prior to the beginning of field construction.
