

DELMARVA POWER

Newark, DE

Lamb provided turnkey Planning, Detail Design, and Construction Services to transform Delmarva's original 3-tiered Control Room with tile mapboards into a state-of-the-art, single level room centered on a 2x4 array of LCD video cubes.

The operator consoles included 3 for Transmission, including 2 for future use, 8 for Distribution, and 8 for Dispatch. 13 support and supervisory positions occupy the flanks of the room.

Lamb also renovated adjacent offices, conference rooms, overview room, and utility spaces. We worked closely with Delmarva to achieve their fast-track schedule and move T&D operations to a backup site during the Construction.
