

EPHRATA NATIONAL BANK

Ephrata, PA

Lamb Planned, Designed and Constructed this major renovation to the Cloister Branch of the Ephrata National Bank.

The focus of the project was to keep this very busy branch operating on a daily basis while completing the renovation. Some of the features of the new facility include additional drive-thru lanes with a drive-thru ATM, doubling the size of the lobby for walk-in traffic, adding all new offices and meeting rooms and the complete renovation of the basement for an employee lounge and storage.

The project field construction activities took less than 6 months and the branch remained in service the entire time.
