## Davis-Besse, Perry and Beaver Valley Plants

**L**amb provided Master Planning, Site Design and building Detail Design for three new off-site EOF / Alternate TSC combination buildings for FENOC. We combined the attributes each plant needed into a common floor plan that was then used at all three sites.

Each Site Plan was designed separately, based on local code and each site's characteristics. The Building Detail Design was nearly identical at all three sites.

Each facility totaled 11,700 S.F., each one has an emergency generator, and all three were located outside the 10 mile EPZ for their respective plants.
