

ITC

Piscataway, NJ

Lamb provided Master Planning, Design, and Construction Services to expand the manufacturing capability of this rapidly growing medical devices manufacturer.

The multi-phase project included the renovation of a newly leased building to consolidate the R&D, marketing, sales, finance and executive departments, and the reconstruction of an existing building to allow for expanded manufacturing operations.

Vital to the success of the project was the planning done to evaluate the existing facilities' designs, the spaces needed, and the departmental relationships to ensure maximum efficiency.

The renovations were designed so that the company experienced no loss time due to relocations and no negative impact on operations.
