

# MONROE ENERGY

Trainer, PA

**L**amb provided Planning, Detail Design, and Construction Management Services for a new 2,400 S.F. blast-resistant office building.

The structure is comprised of six modular units, purpose-built to protect personnel and equipment in a potentially hazardous section of the refinery.

In addition to the specialized structure, the HVAC unit is also blast-rated to provide pressurization and airflow into the facility in the event of an incident. The unit is connected to a stainless steel fresh air intake tower providing emergency ventilation needs.

The interior components include 8 offices and a conference room that can double as a shelter for other personnel working in the area.
