

MONROE ENERGY

Trainer, PA

Lamb provided Planning, Design, and Construction Services for the complete renovation of this legacy office building at Monroe Energy's Trainer Refinery.

Lamb's team worked with Monroe to provide a modern and efficiently designed office space to meet their needs.

Within the 7,600 S.F. building, a new staircase was added, as well as a large corporate conference room, break areas, private offices, and cubicle spaces.

A Variable Refrigerant Flow (VRF) HVAC system was installed to provide energy savings and a greater degree of control in each office area.
