

PEPCO

Bethesda, MD

Lamb provided Planning, Design and Construction Services for the renovation of PEPCO's Transmission and Distribution Control Center to maintain current industry standards and best practices.

The Control Room was redesigned into a fully ergonomic space that includes a new video wall and 28 new sit-stand operator consoles that were custom designed by Lamb. An Overview Room that extends into and overlooks the Control Room was built to allow outside stakeholders on the upper level to observe the operations floor.

Other renovations to the Control Center included creating a new Training Room and Transmission Area adjacent to the Control Room, upgrading existing office area, and creating a new, separate and secure office area in the upper level of the facility.
