

PORTLAND GENERAL ELECTRIC

Portland, OR

Lamb provided Planning, Design, and Construction for a new 18,000 S.F. High Reliability Data Readiness Center. The facility is Tier III Reliable with redundant distribution paths.

A feature of this building is the Economizer function of the air handling units. Controls are installed to monitor the outside temperature and humidity, allowing the building to employ free cooling for the majority of the year.

By utilizing recycled material finishes in the interior design, minimally disturbing the surrounding site area and entering into a two year green power contract, a LEED Certification was achieved.
