

SOUTHERN COMPANY

Birmingham, AL

Lamb provided complete Planning, Site Selection, Detail Design and Construction Management to help Southern build this new 75,000 S.F. combination Control Center and Data Center.

The building features two separate Control Rooms, one for regional transmission and one for state-wide control. There are over 20 operator positions in the two rooms, many with sit-to-stand consoles, and overhead or rear projection systems to provide wide area views. In addition, over 100 of Southern's Transmission and IT personnel are housed here. Finally, a 6,000 S.F. Data Center will house a new EMS-SCADA system.
